

st.logo

Renders a logo in the upper-left corner of your app and its sidebar.

If `st.logo` is called multiple times within a page, Streamlit will render the image passed in the last call. For the most consistent results, call `st.logo` early in your page script and choose an image that works well in both light and dark mode. Avoid empty margins around your image.

If your logo does not work well for both light and dark mode, consider setting the theme and hiding the settings menu from users with the configuration option `client.toolbarMode="minimal"`.

If a user clicks the logo, they are redirected to your app's home page.

Function signature	[source]
<pre>st.logo(image, *, size="medium", link=None, icon_image=None)</pre>	
Parameters	

image (Anything supported by `st.image` (except `list`) or `str`)

The image to display in the upper-left corner of your app and its sidebar. If `icon_image` is also provided, then Streamlit will only display `image` in the sidebar.

`image` can be any of the types supported by `st.image` except a list. Additionally, the following strings are valid:

- A single-character emoji. For example, you can set `image="🏠"` or `image="🚀"`. Emoji short codes are not supported.
- An icon from the Material Symbols library (rounded style) in the format `":material/icon_name:"` where "icon_name" is the name of the icon in snake case.

For example, `image=":material/home:"` will display the Home icon. Find additional icons in the [Material Symbols](#) font library.

Streamlit scales the image to a max height set by `size` and a max width to fit within the sidebar.

size ("*small*", "*medium*", or "*large*")

keyword-only

The size of the image displayed in the upper-left corner of the app and its sidebar. The possible values are as follows:

- `"small"`: 20px max height
- `"medium"` (default): 24px max height
- `"large"`: 32px max height

link (*str or None*)

keyword-only

The external URL to open when a user clicks on the logo. The URL must start with "http://" or "https://". If `link` is `None` (default), the logo will not include a hyperlink.

icon_image (*Anything supported by `st.image` (except list), str, or None*)

keyword-only

An optional, typically smaller image to replace `image` in the upper-left corner when the sidebar is closed. This can be any of the types allowed for the `image` parameter. If `icon_image` is `None` (default), Streamlit will always display `image` in the upper-left corner, regardless of whether the sidebar is open or closed. Otherwise, Streamlit will render `icon_image` in the upper-left corner of the app when the sidebar is closed.

Streamlit scales the image to a max height set by `size` and a max width to fit within the sidebar. If the sidebar is closed, the max width is retained from when it was last open.

For best results, pass a wide or horizontal image to `image` and a square image to `icon_image`. Or, pass a square image to `image` and leave `icon_image=None`.

Examples

A common design practice is to use a wider logo in the sidebar, and a smaller, icon-styled logo in your app's main body.

PYTHON

```
import streamlit as st
```

```
st.logo(  
    LOGO_URL_LARGE,  
    link="https://streamlit.io/gallery",  
    icon_image=LOGO_URL_SMALL,  
)
```

Try switching logos around in the following example:

PYTHON

```
import streamlit as st  
  
HORIZONTAL_RED = "images/horizontal_red.png"  
ICON_RED = "images/icon_red.png"  
HORIZONTAL_BLUE = "images/horizontal_blue.png"  
ICON_BLUE = "images/icon_blue.png"  
  
options = [HORIZONTAL_RED, ICON_RED, HORIZONTAL_BLUE, ICON_BLUE]  
sidebar_logo = st.selectbox("Sidebar logo", options, 0)  
main_body_logo = st.selectbox("Main body logo", options, 1)  
  
st.logo(sidebar_logo, icon_image=main_body_logo)  
st.sidebar.markdown("Hi!")
```
